

Key Features of

Geomagic Freeform is a unique modeling system for fast 3D sculpting of detailed organic designs. With comprehensive modeling and manufacturing analysis toolsets, Geomagic Freeform allows you to retain artistic control, avoid production surprises, integrate with traditional CAD workflows, and send models directly to prototyping and manufacturing.

- **CREATE PRODUCTION-READY MODELS** of complex and organic forms using tools to analyze and fix draft problems, create shelled models and develop complex parting surfaces.
- **THIS IS THE ONLY INTEGRATED MODELING SYSTEM** that lets you model with polygons, NURBS*, subdivision surfaces and voxels.
- **PRODUCE AND APPLY CUSTOMIZED TEXTURES AND PATTERNS**, which can be instantly ready for prototyping and production.
- **FREEFORM'S INTUITIVE MODELING INTERFACE**, when used with a Sensable Phantom haptic device, allows you to feel, push, pull and tug the contours of your model.
- **EASILY EXPORT MODELS** to a variety of existing CAD/CAM tools, animation programs, 3D printing formats and more.

*NURBS surfacing and tools are only available in Geomagic Freeform Plus.

Contact your local Geomagic representative for more information.
